POST	`/roles/{id}/permissions`	Sync permissions attached to a role.	Super-Admin
GET	`/permissions`	List permissions.	Super-Admin
POST	`/permissions`	Create a new permission.	Super-Admin

Conventions & Headers

ITEM	NOTES
Auth header	`Authorization: Bearer <sanctum-token>`
Accept header	`Accept: application/json` (required so validation returns 422, not a web redirect).
File uploads	Use `multipart/form-data`. For `PUT` routes, POST with `_method=PUT`. Do not set `Content-Type` manually.
File URLs	Returned via `profile_image_url`, `documents[].file_url`, `company_logo_url`. Served through `public/storage` symlink (`php artisan storage:link`).
Permissions	Spatie `spatie/laravel-permission`. Seed via `php artisan db:seed --class=RolesAndPermissionsSeeder`.
Error shapes	`{ "success": false, "message": "..." }`, with `errors` object on 422 validation failures.
